## Senior Care Health Check

Beginning at around age 7, your pet enters his or her senior years. Often, pets begin to develop diseases common to their human counterparts, such as diabetes, heart disease, endocrine disease and cancer. These diseases can go unnoticed in their early stages; therefore, preventative health care is very important. Please take a few moments to carefully complete this senior care health check, so that we may become better acquainted with your senior pet.

SIGNS	YES	NO
